- Extendago → Shopify:
 - Creating new products
 - Process product changes
 - Process stock changes
 - Process images
 - Process category structure
 - Apply discount rules
 - Hide products form webshop

Configuration tabs:

1. API settings

- Enter and check your credentials

The screenshot shows the 'API settings' configuration page in the Extendago interface. The page has a navigation bar with tabs: 'API settings' (selected), 'Setup', 'Import settings', 'Woocommerce', 'Status', and 'Videos'. The main content area is titled 'API settings' and contains three input fields: 'Arture API key' with the value 'Fgheyu78Jnk9', 'Extendago username' with the value 'demo1@kassacompany.nl', and 'Extendago password' with masked characters '.....'. Below the fields are two buttons: 'Wijzigingen opslaan' (Save changes) and 'Check API key and secret'. At the bottom, there is a small text note: 'If you encounter problems or have questions regarding the functionality of the API. Please refer to the frequently asked questions or contact us.' followed by two links: 'Frequently Asked Questions' and 'Request support'.

2. Setup

- Quick explanation of our setup guide.
- Export:
 - With an existing webshop you can perform a one-time export of your products to Extendago. All basic product data is than directly available in Extendago. You can perform the action with the blue button “Export products” after which the processing is started. This may take some time!
- Import:
 - Simply create your products within Extendago, after which you can have them automatically processed in your webshop. You can always manually start a full synchronization with the blue button “Import products”.

3. Import settings

- Determine how your product/data is processed in the webshop. For example, do you always want to process new products as a concept and publish them yourself? Choose the options that match your webshop.

4. Shopify

- Define your shop for order processing and enable, if you are going to live, the order processing

5. Status

- The status tab provides a good overview of all current actions and actions. This is therefore the first check with any question. For example, you can see here when a certain action took place for the last time. With the remaining batches you can check whether current data processing is still taking place. The logs also provide extensive information for any support request.

6. Videos

- For many default actions we have create a video.

FAQ:

How quickly do new products and changes go live?

All changes are processed every 5 minutes. Depending on the amount of changes at that time, this can vary between 5 and 15 minutes.

Where can I enter meta data or additional attributes for a product?

The link only processes the data that is available. Within your webshop you can easily supplement this with extra information.

What about the web orders?

The checkout flow can be set completely according to your own wishes with links to payment and shipment providers. Apart from the standard Woocommerce processing, the web order is also processed directly in Extendago upon payment.

How can I place all my discounted products in a separate category?

Create a category within Woocommerce and set it as a Sale category on the Import settings tab.

The image shows a screenshot of a web form. On the left, there is a label 'Sale category' with a vertical pink line to its left. To the right of the label is a dropdown menu with the text 'Select category (optional)' and a downward-pointing arrow on the right side.

I don't see my changes in the webshop?

Any change will be processed within 5 minutes. However, with many changes, this can take more time. Check on the status tab if there are any remaining batches available.
