Extenda GO POS Release Notes

Version 4.6

Written by

Bjørn Willoch Bjanger, Product owner

Contents in release

4.6

These are the major changes in Extenda GO POS version 4.6

This version covers work done in sprints 64,65, and 66.

New features

- Payments with VivaWallet BLE card reader supported, available in most of Europe
- Payments with Trust terminals supported, available in UK, Malta and other countries
- Adyen S1F2 terminal can now be connected over Bluetooth
- New Sumup SDK has been added, supporting Solo reader and tip handling on Solo
- Receipt printing on Adyen terminals with printers now supported. If using for instance Adyen S1F2 as your GO Pay terminal, use the device as receipt printer and have one less device to consider.
- Referenced refunds for Adyen, Payplug and Trust terminals have been added
- Refund for Vipps has been added, referenced and non referenced.
- Bottle deposit is now handled as a complete mechanism, not with addons. Define deposit products (only one or a few needed), and attach them to relevant products. When the main product is sold, deposit product is also sold. Deposit products can also be attached to bundle products, for

instance a tray of soda cans. You can also return deposit products, a favorite source of income for many kids

- BCRS bottle deposit reporting, as required on Malta, is now supported
- ID24 customer displays are now supported. You can run customer display on external devices with many different form factors, and mix the customer display with commercials, donations and many other modules
- Retain24 gift cards are now supported, also with PIN validation
- Customers can now be edited in POS
- Customers are now shown in only one list
- VAT rate labels are now printed in receipt lines
- Receipt printing has been optimized for less paper waste, more compact print layout
- Min and max for total number of addons across addons now supported
- Button to merge all shared bills for a table has been added
- Product ID can now be shown on product info page
- Customer display line handling improved
- Fixed price per product promotion handling has been improved massively for large price lists
- Customer address printed when a customer is present on a receipt
- Receipts with customer present has been given it own receipt header phrase, so it can be translated “Factura” and “Fatura” for Spanish and Portuguese.
- Shelf number and EAN now shown on preorder screen and picking list print, to facilitate order picking
- Svea payments have been reinforced with preset values for customer data
- Customer notes scrollable and editable
- Customer web view support added
- Selection of customer contact to bill. If a customer has multiple contact persons defined, select one of them and store this on the bill
- Added button to get changes in test builds of GO POS
- Back button and forward button added to web view
- When return reason codes have been defined, you must now select one of them when doing returns

Bugs fixed

Numerous fixes and improvements have been made.

- Share bill view messes up after selecting table in iPOS
- Product view in iPOS must be fixed
- Order view in iPOS needs fixing
- Customer phone number is prefilled wrong in mobile payment pop ups
- Impossible to select product in iPOS when scanning and more than one product has the same SKU
- Gift card does not consider that the total amount changes
- Customer display handling of changes to line items needed
- Other smaller improvements and fixes
