# Extenda GO POS

## Backoffice Release Notes

---

**Version 3.8.0**

### Written by

Bjørn Willoch Bjanger, Product owner

### Contents in release

#### **3.8.0**

These are the major changes in the backoffice version 3.8.0

This version covers work done in sprints 70, 71 and 72. Many preparing steps and improvements here and there, not so many new completed features in this release

### New features

-

### Bugs fixed

Numerous fixes and improvements have been made.

- Product filters to search for products by attributes is now available. The menu item is only shown when product filters are enabled by parameter
- Top menu has been restructured to align with new features being added, like the import and export of customers made it necessary to create an "Import and export" node outside of products.
- Stock is now reserved in preorders and finalized when the order is closed

- Average cost price calculation from cost price given in purchase orders
- POSConnector.js expanded with functions for validating products in POS and adding products to basket while staying in the web view
- Cost price added to supplier sales report for commission sales purposes
- Unit price functionality allowing you to print price per liter or kg for example on shelf labels
- Improvements to Netsuite integration
- Improvements to Xero integration
- Send receipts by SMS
- Bundle products can be added to layout templates
- New Resurs Bank integration
- New integration to look up first possible delivery date from Microsoft NAV
- Multiple locations for customers. You can now define different offices for customers, allowing selection of these for delivery from POS
- Flag added to tender types to hide the tender type in POS
- New privilege added to roles to access discounts
- PIN validation for Retain24 gift cards added
- Improvements to gift card report to be able to run report for a full year
- Handling of long running payment requests has been added for Svea and Resurs Bank payments where the result of the payment request can arrive hours or days later. Such an order can be put away as a preorder and revisited to check if payment has been approved
- Lots of small improvements here and there, and some bugs have been addressed

## API changes

- Stock reserved from preorders
- Product filters is a new entity, and list of filter values are added to product model
- Cost price added to purchase order lines
- Unit price attributes added to products and variants (base unit, quantity, actual unit)
- Resursbank added as a new tender

- POSConnector.js expanded with two new parameters to stay in webview, and to validate products added against POS database

## **New parameters**

The following new parameters are added in this backend release:

- Parameter to print line labels in KDS
- Flag on tender type to hide it in POS
- Parameter to print customer address on receipts
- Parameter to enable ID24 customer displays
- Parameter to calculate average cost price from purchase orders
