

Extenda GO POS Release Notes

Version 4.7

Written by

Bjørn Willoch Bjanger, Product owner

Contents in release

4.6

These are the major changes in Extenda GO POS version 4.7

This version covers work done in sprints 67, 68, and 69.

New features

- Web view URLs can now be set at a shop level, this is useful for booking calendars where you can go directly to the calendar of the shop
- Age is now verified if it has not been verified before. This allows age restricted items to be added to shared bills from Go Look as well
- Serial number handling has been rewritten to more flexible and covers items requiring serial numbers being added from web view. Items that will be shipped will not get serial numbers in shop
- Italian language has been added to POS, KDS and Go Look
- When doing returns, we now check that the item has not been returned already in other bills
- PayPlug terminals are now integrated with POS
- Access to discounts is now controlled by role
- You can now hide misc tender types from POS, so tenders like "Marketing" and "Customer service" that you often define for backoffice use to create gift cards from backoffice, are not shown in POS
- You can now communicate with Seiko RP-F10 using serial port. Ipad will be charged over the cable like with Star mc Print 2 and 3

- Discount codes for promotions can now be scanned, using the prefix "discountcode:" and the code set in a promotion. This facilitates distributing such codes to customers
- Fiskaltrust integration is now complete, opening for use of Extenda GO POS in France!
- If a customer has multiple locations, you can now select one from a list when adding the customer to a bill
- Resurs Bank payments are now supported in POS
- You can now select supplier when creating products in POS
- You can now set sell on commission when creating products in POS, when commission sales is enabled
- Nets Baxi SDK updated
- Ticket session that are in the past will now be filtered away in POS
- Long running payment requests when paying with Svea is now handled by bill being converted to a preorder and put away under running man icon. Payment status is shown there, and when result is gotten from Svea, the sale can be taken back into bill and completed
- Product filters are now out. Set filter values on your products and filter for combinations of attributes to find the optimal product. Available through the Funnel button added next to grid view and list view buttons for product grid when filters have been enabled by parameter
- Terminal type used in now stored in transaction to provide new dashboards in Kibana

Bugs fixed

Numerous fixes and improvements have been made.

- Customer contact should not stay assigned to bill after customer is removed
- register_sequence_number is not set for shared bills
- Fix Retain24 crash
- When creating a product in B0, it is possible to create it without price
- E-commerce search is not working
- Order id should not be able to be taken when order is created
- Other smaller improvements and fixes
