

Integration with Adyen NYC1 payment terminal - Set up

Last updated 2024-12-16

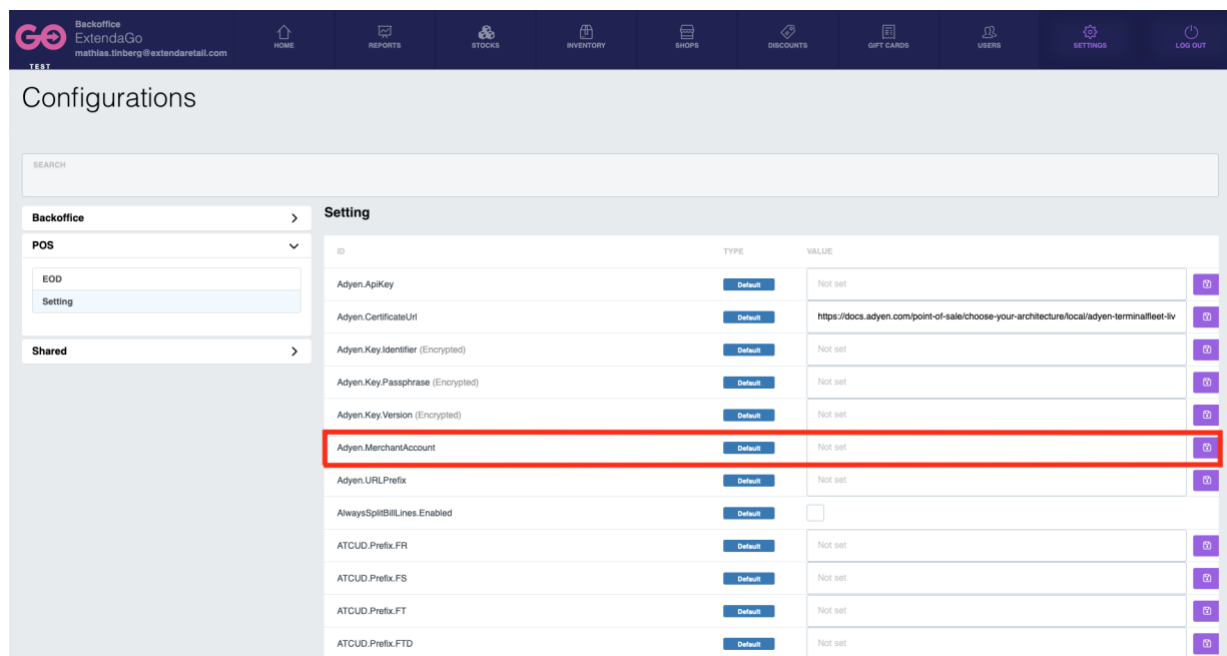

Integration with Adyen NYC1 payment terminal

Prerequisites

Complete the onboarding process and order the terminal from Extenda Go.

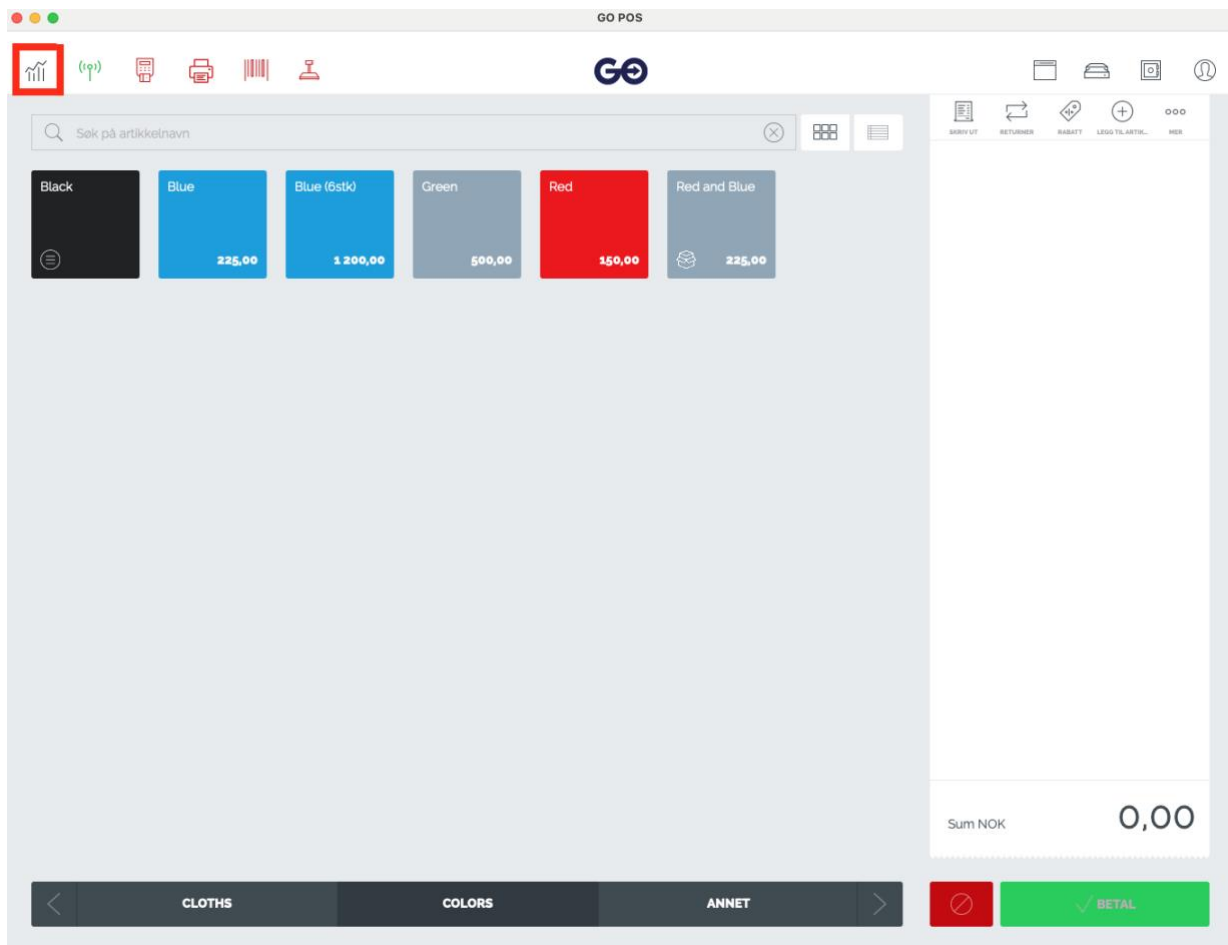

Backoffice preparation

Log in to the back office at <https://wbo-etail.wallmob.com/login>. From the menu, select Settings → Configuration. On the left side, click POS → Settings and enter the Adyen Merchant Account as shown in the picture below. Remember to log in and out of the app before connecting the terminal.

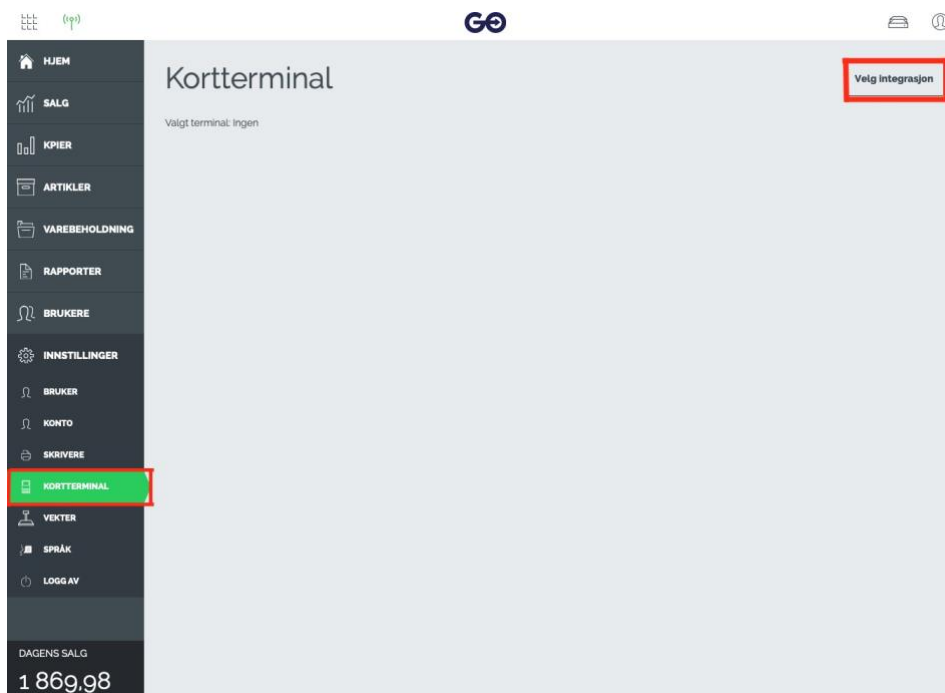

Setting up the terminal in ExtendaGo POS

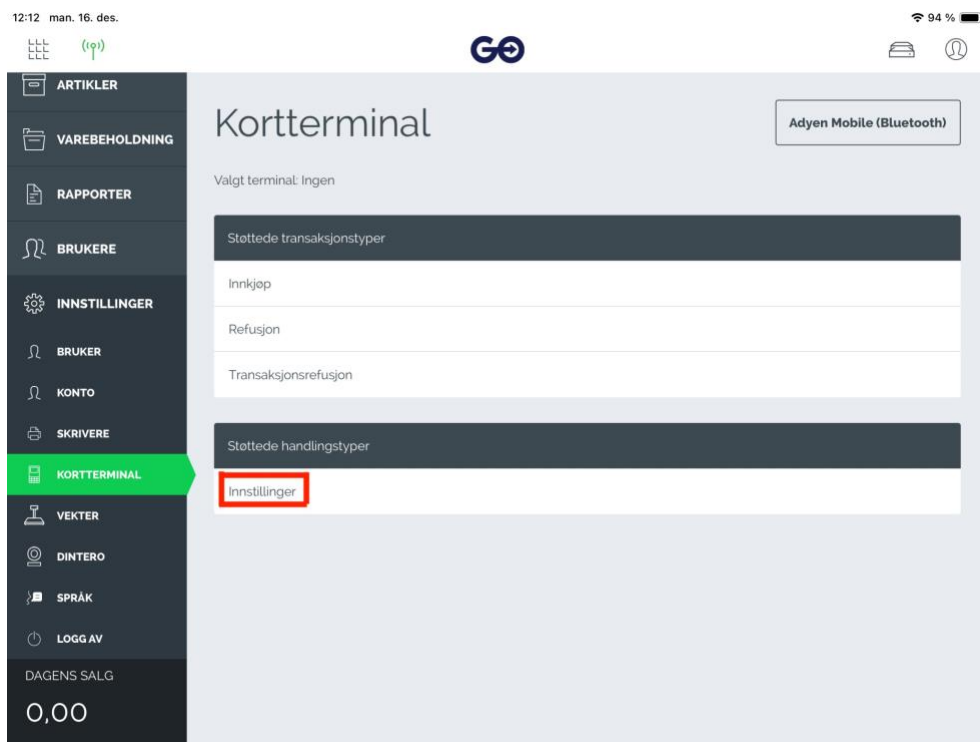

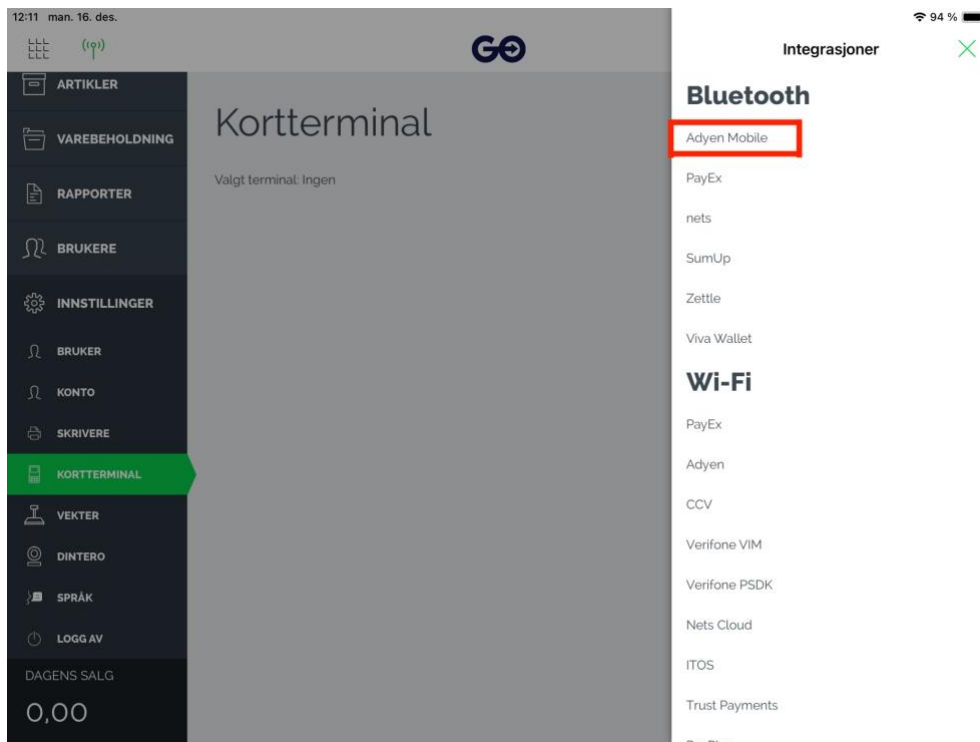

- Open the app on your iPad.
- Log in and select your store and register.
- Then hit the back office symbol.

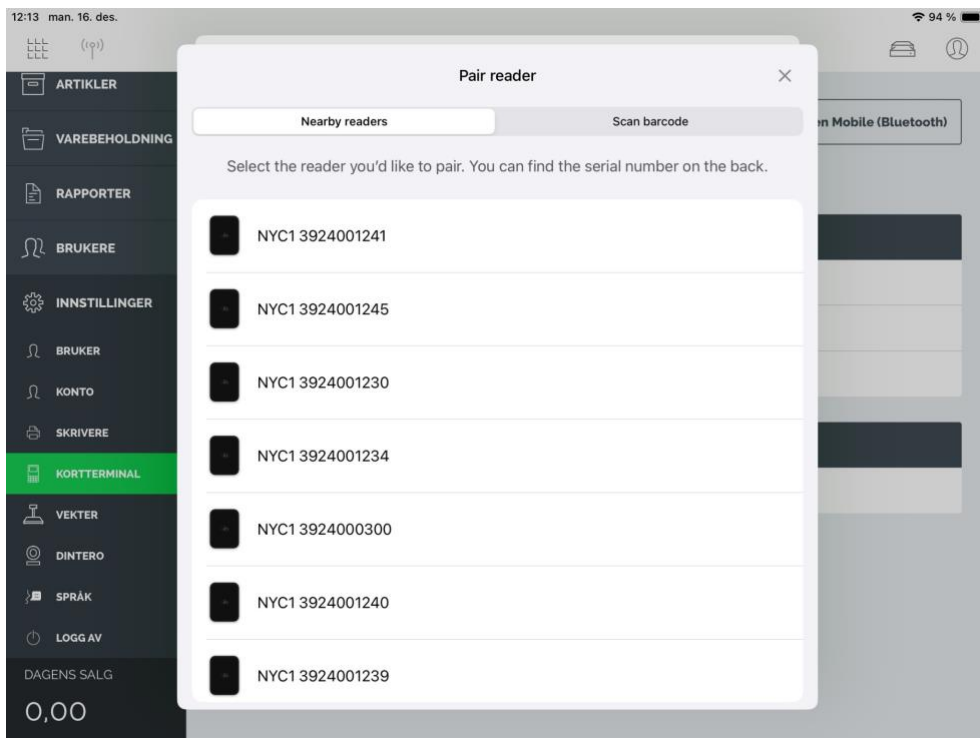

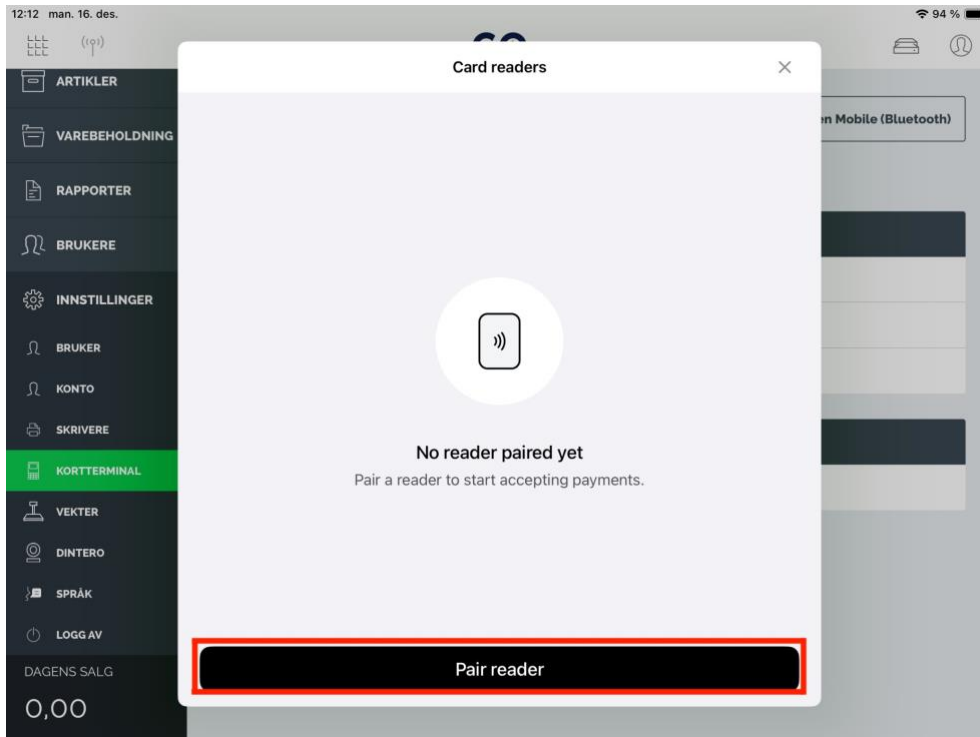

- Select SETTINGS - TERMINAL, and then “Select integration” in the upper right corner.

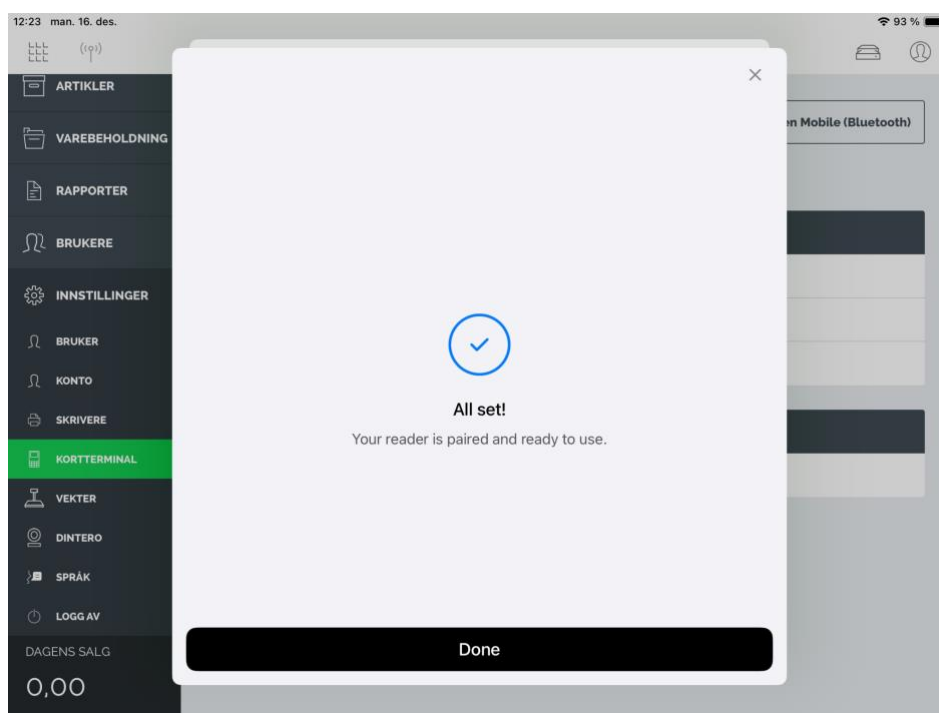

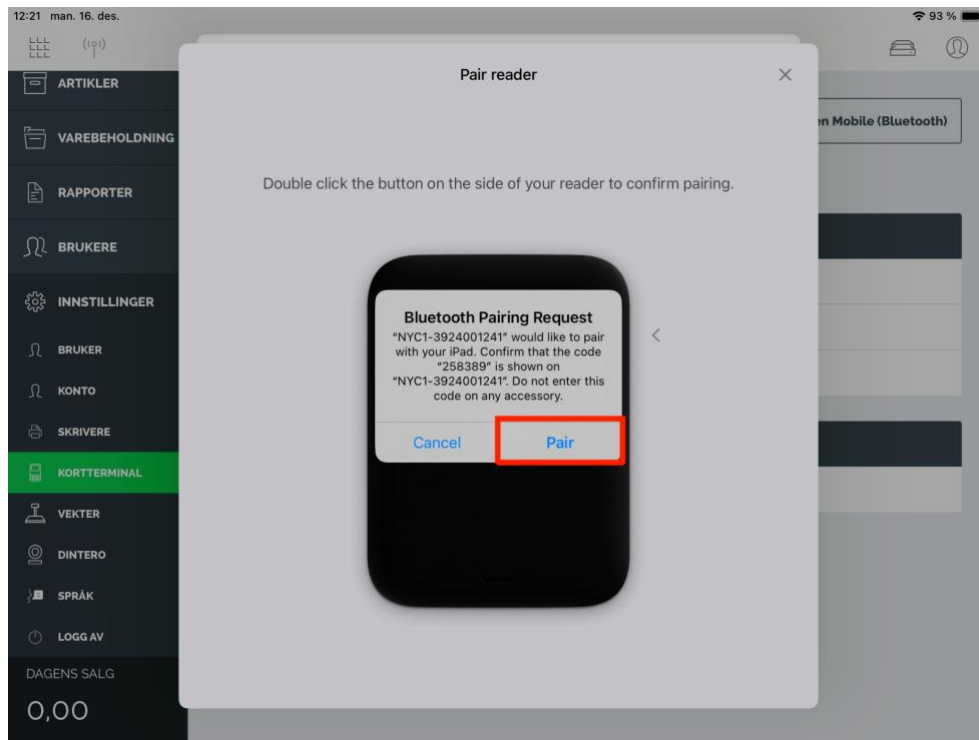

- Select "Adyen Mobile" and click on "settings"

- Next, click "Pair Reader" and select the correct NYC1 serial number, which is located on the back of the terminal

- Once the correct reader is selected, click "Pair," then double-click the button on the top right corner of the terminal. It should now indicate that the pairing is successful.

- Your NYC1 is now paired and will appear under "Terminal" in the settings. When you exit the back office and return to the point of sale, you'll also see a terminal icon at the top of the screen, indicating that a terminal is successfully paired
