

# Extenda GO POS Release Notes

---

**Version 4.17 - expected release in app store 25.06.2025**

## Written by

Bjørn Willoch Bjanger, Product owner

## Service pack releases to 4.16 POS

There were two service pack releases for 4.16:

- **V4.16.1:** Earliest delivery date not shown the first time
- **V4.16.2:** Diller amount stamp cards supported. Two days added to delivery date for NAV integration. Multiple tender button presses resulted in multiple orders created. Funbutler logo added. Removing shipping product from endless aisles order resulted in crash

## Contents in release

### 4.17

These are the major changes in Extenda GO POS version 4.17

This version covers work done in sprints 97, 98 and 99.

## New features

- Adyen SDK has been updated
- Sumup SDK has been updated
- Tipping on Paypal reader has been implemented
- We now display membership points on Diller popup when coupons are selected
- You can now scan barcodes in the format customer:{customer\_id} and POS will look up the customer and put it into the bill

- When you do returns, and for card payments requiring signature, the customer will now sign on the screen, and the signature flows with the order to the server and is included in the receipt PDF. This eliminates the need for the return receipt, which is no longer printed. The cashier performance report and the filter for orders with returns will help you look into cashiers with deviating behavior
- When you select shop, we now ask if you are sure you picked the right shop before login proceeded
- Tap to pay with Sumup is now implemented in countries where tap to pay on iPhone is implemented
- Predefined comments for orders has been implemented
- Common receipt header and footer for all shops has been implemented. This is set up on the master user page in admin site
- Allow skipping selection of tracking category
- You can now register cash movement events in POS, meaning you can take cash for local purchases and have this recorded in a clean way, and also put money back in. This will be accounted for in EOD and Z report
- Offline Swish payments are now supported for the Swedish market
- Layout templates are now updated with Pusher and running changes
- We have added setup for store selection on the Adyen setup page for NYC1 and tap to pay, for merchants with multiple stores defined in Adyen.
- Printing of pro forma receipt for down payments has been moved from downpayment page to downpayment completed page
- Downloaded orders for returns are no longer stored in the database, as they can mess up downloading orders from the server

## New parameters

- `Shared.Setting.Integrations.Swish.Enabled`, enabling offline Swish
- `POS.Setting.PredefinedOrderComments`, lets you define comments that can be selected in POS and shown in KDS

## Bugs fixed

The following fixes and improvements have been made.

- Transaction Id has already been taken, Nets Connect at Cloud

- Scanning offline customer while offline does not work
- Incorrect amounts for promotions
- Finishing orders from running man crashes the pos
- Long variant names are shown incorrectly in POS
- Sequence number for Z reports/EOD is skipping in POS
- POS shows SocketMobile as a selected scanner all the time
- Many other improvements and bug fixes

## Complete issue list

Many of the issues registered as bugs are findings in functional testing and regression testing, so called QA bugs. Few of the bugs have actually been detected in production.

 WM-5753	Change Turnover endpoint	POS 4.17	CLOSED 	-
