- **V4.17.4:** Problem making charges when there are connection errors. Ticket effective amount appears three times. Funbutler and ExtendaGO POS, payments sent with wrong amounts to POS. Observers missing after preorder cancellation
- **V4.17.5:** External paid orders and preorders in POS. Fix WMPrinterController crash. Fix non-updating preparation fields in preorders

Contents in release

4.18

These are the major changes in Extenda GO POS version 4.18

This version covers work done in sprints 100, 101 and 102.

New features

- Network handlers rewritten for Alamofire
- VAT rate overrides can now be defined in named groups, allowing you to use other VAT rates than the selected VAT rates in certain situations like travelling into other countries. When you select an override group, products are sold on the corresponding override until the group is unselected
- Translations added for "Orders" and "Open in web" buttons on customer info page
- Webp images are now supported in user list and galleries
- Cashlogy cash machines are now supported in POS! Small,sleak iPad POS with a cash machine integration, now we are talking 🙂
- Cashier renamed to Sales person on order summary page
- In the orders list, you can now filter orders by register, dates, and downloaded orders are separated from the local sales
- X and Z report now shows number of payments and amounts paid for each cardtype, vipps, misc type and cash
- The functionality to close and handle fiscally external orders in POS, is now reimplemented with the new order logic, and should be used to handle sales in Ordin, Funbutler and other sources correctly in fiscalized countries

New parameters

- The attribute "close_order_in_pos" will now be picked up by the register selected to handle this and orders are closed and reported on fiscally. If you need orders from Ordin, Funbutler, Sweetspot and other integrations to appear in EOD report and Z report, this attribute must be activated

Bugs fixed

The following fixes and improvements have been made.

- Deposit products are not automatically returned with main items in return mode
- Product images get blurry in old self checkout mode
- Gift cards do not show the text for the expire date
- Serial number popup on iPhone POS is broken
- Can not print cached receipts
- Products with variants are not added as external products in endless aisles
- Seiko customer display shows 0x of deleted item
- LAN Star printer does not refresh its status
- Product image is not updated immediately
- Receipt printer on Adyen terminals stopped working with last version
- Failed card transactions were reported in X- and Z reports

Complete issue list

Many of the issues registered as bugs are findings in functional testing and regression testing, so called QA bugs. Few of the bugs have actually been detected in production.
