Extenda GO POS

Backoffice Release Notes

Version 3.20.0 - release estimated 19.11.2025

Written by

Bjørn Willoch Bjanger, Product owner

Contents in release

3.20.0

These are the major changes in the backend version 3.20.0

This version covers work done in sprints 107,108 and 109.

New features and improvements

- You can now import purchase orders in backoffice. As a tool for companies ordering products through other channels, but want to be able to receive the purchase orders in the shops using Go Ctrl, purchase orders can now be imported into the system.
- Fiskaly for Austria is now supported, and will be enabled for activation in the default Austria merchant group
- Purchase orders now filter products by shop when a shop is selected for the purchase order
- When AVIF images are selected for products and categories, they are converted to PNG
- Product import: Add attributes active, exclude_from_discount, hide_from_sco, block_in_sco
- Cash movement reasons have been added to the cash movements model
- Add sku to line items in Xero Invoices

- Advanced search added to integration logs
- Configure Credit notes on Xero page
- You can now define sets of images to be displayed in the new customer display that is part of GO POS Windows. Different sets can be made per shop group, and per state of logged in or closed
- Comment has been added to masteruser entity, to facilitate customer handling for our partners that can now save a comment for each masteruser
- Change formatting of data that is sent to Diller
- Notify users when Xero integration disconnects
- Add new entity to register shop visitors. You can now register the number of visitors to each shop, and sales reports will calculate ratios for sales vs visits
- You can now add images to layout template folders, and customize the font color used in the layout template
- Original price added to product import

Bugs fixed

Numerous fixes and improvements have been made.

- Adyen payments go to Deviation account in eAccounting
- Show VAT selection for variants of products with variable price, so they are shown in POS
- CSV EOD issue. Ecommerce numbers not included
- Xero customer sync duplicates customers in our service
- Client configuration skipped in changes
- Customer external attributes reset to 0 after Xero Customer sync
- Incorrect Date Version on SIE4 Files - Not Legally Compliant in Sweden
- Accept terms and conditions checkbox throws a console error
- Bundle fee discount is not handled in Xero
- Reports were not given in German
- Comments on purchase orders need to be present before creation

API changes

- Create Order attributes `should_send_email` and `should_send_sms`, which, when set to "1", would trigger Order to be sent to email or sms
- Should not be possible for add-on products to be added to inventory count via API
- Add attribute `remaining_balance` to transactions
- Restrict changing order's status from completed to canceled/open
- Allow to change 'customer_name' after Order is completed
- Remove duplicate external attributes when using API v5

New parameters

The following new parameters are added in this backend release:

- `POS.Setting.DailyCashLimitPerCustomer`, default empty. Stores a long number
- Add user role rights to allow price override in orders and to do EOD: `WM_RIGHT_OVERRIDE_PRICES_ON_LINEITEMS` (default disabled, `WM_RIGHT_ACCESS_EOD` (default enabled)
- Add parameter `POS.Setting.OverridePriceOnLineItem.Enabled`, default value false. Allowing price overrides to be done when your role allows this
- `Shared.Payment.Fiskaly.Enabled` is used for FiskalyDE and that is not clear at all. Make it in the same style as `Shared.Setting.Integrations.FiskalyES.Enabled` and `Shared.Setting.Integrations.FiskalyAT.Enabled`
- `Backoffice.Setting.VisitorCount.Enabled`, default value false. Enable inputting visitors to the shops per day
- `Backoffice.Setting.CsvFilesSeparator`. You can now select the character that should be used to separate columns in imports and exports. Default value is “,”
- Change default value of `POS.Setting.Adyen.CertificateUrl`
