

# Extenda GO POS Release Notes

---

**Version 4.20 – expected release in app store 04.02.2026**

## Written by

Bjørn Willoch Bjanger, Product owner

## Service pack releases to 4.19 POS

There were seven service pack releases for 4.19, much due to the need to add logs to resolve a tough problem with printing to Epson in certain situations:

- **V4.19.1:** Fix Star crash. Fix orderIsAsap value crash
- **V4.19.2:** Fix addon view crash. Legacy nullability crashes after core data rewrite obj c -> Swift
- **V4.19.3:** Update Epson SDK to 2.35.0
- **V4.19.4:** Adding logs for Epson printing. Fixed external attributes casting crash
- **V4.19.5:** Communication problem between POS and terminal for both Nets and Verifone
- **V4.19.6** More logs added for Epson printing
- **V4.19.7** Epson printing issue fixed

## Contents in release

### **4.20**

These are the major changes in Extenda GO POS version 4.20

This version covers work done in sprints 106, 107 and 108.

## New features

- A major improvement in this version is the redesign of bill action buttons, moving them from the top of the bill and the “More” button to

expand, into a hamburger menu icon next to the payment buttons expanding a full menu of actions, giving much more space both to the bill itself, but also to each bill action. This makes information like active customer much more available

- POS will now print order slips for preorders coming in to running man, as for KDS
- The feature to use POS to close orders received from Ordin, Funbutler or other systems has now been reintroduced, allow full fiscalization and financial reporting also for e-commerce orders. The feature must be enabled with the parameter Shared Setting.ExternalOrderClosing.Enabled. Then you get a selection field on the shop page to select the register that will do the order closing for that shop. It will consume all orders received where the attribute "close\_order\_in\_pos" is set to 1
- Transactions are now printed on pro forma receipts, this will enhance the value of this print for deposit payments made for preorders
- You can now reopen the coupons view for diller to select coupons to use without having to remove customer and readd her. You can tap on the customer club icon in the bill actions to make the dialog reappear
- When a new customer is added to the customer database, you will now get a duplicate warning if the number or email already exists on another customer
- Gift cards can now be used in shared bills and parked bills
- Customer group editing can now be disabled in customer screen, following the parameter POS Setting.CustomerGroupEditing.Enabled, default value true
- When discount reason codes are defined in backoffice, you are now able to select the reason why a discount is given in POS
- FreeItem discount type is now used when pushing the new FREE discount button for line items
- On the discount popup, when percentage discount is selected, you can now select preset values 10%, 25%, 50%, custom discount or the Free item described above
- If your role does not have access to EOD, you will no longer be able to do EOD
- If unsent data exist when you try to log out, the retry button will now try to resend the data actively
- You can now scrap the print queue from the printer popup. In some scenarios you can attach a printer with a huge list of unprinted

artefacts that make no sense printing at the current time. You can now push a button to discard all waiting prints

- There is now a new feature to print a pick list for the bill. The pick list will show you what to get, where the items are placed in the shop, the quantities of each item, and the barcode of the item. For a bundle product, all products inside will be listed showing this information
- The city field is now shown after postal code in the delivery address part of shipped orders
- POS will now post Misc payments on the general misc tender if all misc types are set to be not shown in POS
- Image for folders in layout templates, and font color set in layout templates are now supported in POS
- A new bill action button is now added to print price labels for all items in the bill. This allows you to print sets of labels when a label printer is connected.
- Printed receipts are now printed in the order they were added to bill
- Adyen Terminal API has been added to handle unexpected responses from payments made by tenders unknown to POS directly, like Twint
- Deferred authorization is now supported for Nets BT terminals, ie Link 2500. When deferred auth mode is activated, either from the terminal settings page or from the terminal popup on the sales screen, all transactions are going to the card terminal with no online authorization being done during the payment. This is an augmentation of the already existing “Force offline” mode, that will do some authorization that renders foreign credit cards unusable.

## New parameters

- `Shared.Settings.ExternalOrderClosing.Enabled`, enables fiscal reporting of ecommerce orders by the POS selected on the shop page
- `POS.Settings.CustomerGroupEditing.Enabled`, allowing customer group membership editing to be disabled

## Bugs fixed

The following fixes and improvements have been made.

- New items do not appear on the campaign
- Shared bills are connected to the previous logged in cashier, not the current one
- Split bill by item does not work with manual products in the bill
- SKU lookup and VAT removal works incorrectly when multiple zero vat rates exist
- Svea orders sometimes miss a secondary transaction reference
- SKU search is not working
- POS crash when resuming shared bill with Retain24 gift card applied
- Airconsole sometimes reporting wrong weight from scales
- Product low on stock reported wrongly as POS looked at stock for main product not variant stock
- Fix category paging crash
- Missing shipping symbol when resuming a split bill
- Split bill function fixed for iPOS

## Complete issue list

Many of the issues registered as bugs are findings in functional testing and regression testing, so called QA bugs. Few of the bugs have actually been detected in production.

↑ WM-1338	Remove Voucher transactions usage	<input type="radio"/> <span>CLOSED</span>
↑ WM-3456	Remove Coupon logic from POS	<input type="radio"/> <span>CLOSED</span>
