Backoffice Release Notes

Version 3.22.0 - release estimated 31.03.2026

Written by

Bjørn Willoch Bjanger, Product owner

Contents in release

3.22.0

These are the major changes in the backend version 3.22.0

This version covers work done in sprints 113,114 and 115.

New features and improvements

- All lines of CSV imports are now parsed and all errors summarised in an error email
- Users that are restricted to shops can now only create users restricted to at most the same set of shops
- Refund to gift cards are now allowed
- Source attribute in orders are now forwarded to Kibana
- Shop group id and shop group name is now forwarded to Kibana
- Order device token value in order is now forwarded to Kibana
- Danish SAF/T is now supported
- If you don't select a shop in the purchase order generator, the first shop connected to the stock location will be selected as shop
- Status on invoices are now synched back from Xero as the invoice is paid
- Performance has been improved for purchase order generation

- The feature to invoice customers from backoffice has been improved by introducing a new entity Invoice, that enables the produced invoice to be stored, edited and resent to the customer
- You are no longer blocked from creating customers in backoffice when diller and Voyado integrations are active, as this is not necessary
- Total cost for the purchase order is now showing on the purchase order generator before the order is created, to be used for verification of the order
- Xero SDK updated to version 10
- Indices added to database to improve performance in several areas
- We have added a button to show/hide password in password fields because of the stricter password policy. The current password policy is minimum 12 characters, at least 1 capital letter and one lowercase letter, and at least one symbol
- Sales reports are now aligned to handle sales tax on items
- The integration to M3 now tags each order sent to be able to add orders that arrived too late after the integration was run
- Prices for gift cards are now also shown with which price regions have price set or not, as for products
- We now trim empty spaces in columns in CSV imports
- Set gift card expiry date to be end of day

Bugs fixed

Numerous fixes and improvements have been made.

- SMS is not sent when finalizing webshop orders
- Inconsistency in EOD reports for which shop an EOD is for in the list
- Credit limit and loyalty points not imported for customer import
- Inclusions and calculations for products in purchase order strengthened
- Impossible to delete epay subscriptions
- Don't create already existing customers in Xero
- Products that use weight have issues with pre-defined discounts
- Stock value for variants in report is using the product price
- Supplier of a product with variants should be shown in Purchase order report
- EOD report not including ecommerce orders

- Incorrect URL handling on Add new stock location
- Bring back average per day into purchase orders
- Products without a price in the selected price region are exported
- Transaction CSV export does not work if shop id is null

API changes

- Email attribute has been added to Order line for tickets and gift cards
- Allow to send "deleted": true in attributes data to delete external attribute
- Attribute checkout_interface is added to orders. iOS POS will populate this with "SelfCheckout" and "Cashier"
- customer_order_number attribute added to transaction, to optionally register an order number in an invoice payment in POS

New parameters

The following new parameters are added in this backend release:

- POS.Setting.Logo.ImageFile, to save an image that will be shown on the flyout menu in Windows POS and Android POS, and on the Windows customer display
- POS.Setting.CustomerSignatureOnOrderSummaryRequired.Enabled, default value false
- POS.Setting.PrintExtraReceiptInsteadOfSigningOnScreen.Enabled, default value false
- New default value for Shared.Bill.PreventReturnAndSalesItemsOnSameBill.Enabled, default value true, to minimize problems with external orders being sent to ExtendaGO
- POS.Setting.HideTimeFromPickUpTime.Enabled, default value false
- POS.Setting.NetsCC.BaseURL parameter added, Default value in test environments (dv, tst): <https://connectcloud-test.aws.nets.eu/v1>. Default value in production environments: <https://connectcloud.aws.nets.eu/v1>
