

Extenda GO POS Release Notes

Version 4.21 - expected release in app store 01.04.2026

Written by

Bjørn Willoch Bjanger, Product owner

Service pack releases to 4.20 POS

There were five service pack releases for 4.20:

- **V4.20.1:** Fix production crashes when printing proforma, improvement to handling of return refunds. Fix crash when activating card terminal
- **V4.20.2:** Infrasec does not resend orders. Enlarge card icon in new payment bar. Bug for shipped items in shared bills, the icons disappear. Increase minutesuntillinkexpires for Svea
- **V4.20.3:** Fix for label printing. Return window opens multiple times after scanning. Downgrade drivers for Link2500
- **V4.20.4:** Scanner stops working after disconnect and status indicators become inconsistent. Difficulties with Star scanners
- **V4.20.5:** Bug in handling of shipped items in shared bills

Contents in release

4.21

These are the major changes in Extenda GO POS version 4.21

This version covers work done in sprints 109, 110 and 111.

New features

- SumUp SDK updated to v6.2.1, enabling Tap to pay on iPhone in Norway, Spain and the Baltic countries
- Support for sales taxes is now ready, opening the American market for us. Voucher logic is also updated to handle sales tax
- New self checkout interface can now bypass the start screen when POS is opened from local URL, as is done in hair salons in Norway, Sweden and Finland. Display language selection will then be displayed on the product screen
- Not active gift cards are now hidden from sale, but are accepted for redemption
- Gift cards redeemed can now be refunded to
- Gift cards are now printed with correct price, issue date and expiration date when reprinted
- Improvements to the layout of the new side menu and direct payment buttons
- Day_tally_id field in orders are now populated to link orders to the correct day tally
- Printed receipts for cancelled orders when paying with SumUp are now shortened
- Error handling for incorrect Adyen device model has been improved to show error straight away, not when doing payments as it was
- Customer signature can now be collected on the order summary page, if enabled by a parameter
- Availy logo has been added to possible logos showing
- Customer details are now available in the orders list in POS backoffice, to make it easier getting in contact with the customer of the order you were looking for
- Downloading speed for accounts with large number of products, stock values or customer prices has now been hugely improved by saving data in batches
- We will now only print EOD report at EOD if you ask for it. This is an internal system report that most people do not need the paper copy for. The image of the report is still produced and sent to backoffice
- Customer card prefixes are now supported, enabling scanning of customer cards with a defined prefix to add them to bill

- You can now select to print the old school return receipt instead of having the customer sign on the screen. This is enabled by a parameter
- POS will now put the interface type used into an order attribute, Self checkout or cashier. This is forwarded to Kibana, to allow reporting on the split between self checkout and manned sales
- ShowOutOfStockProducts parameter was ignored in the new self checkout interface

New parameters

- POS.Setting.CustomerSignatureOnOrderSummaryRequired.Enabled, default value false
- POS.Setting.PrintExtraReceiptInsteadOfSigningOnScreen.Enabled, default value false

Bugs fixed

The following fixes and improvements have been made.

- Paying with misc reduced cash payment limit for customer
- Split bill with diller coupon present is not splitting evenly
- Main view is broken after clearing and closing filters view
- POS APP frozen in certain scenarios
- Flat rate discount not working properly
- Scanning non valid order id put POS in an infinite loop
- Temp categories are visible in POS
- When looking up a customer using Vipps, a ghost customer entity was shown in bill footer

Complete issue list

Many of the issues registered as bugs are findings in functional testing and regression testing, so called QA bugs. Few of the bugs have actually been detected in production.

	WM-6785	POS - [ServiceDesk] Option of hiding gift cards that are no longer sold or want to be sold		CLOSED
