Extenda GO POS

Backoffice Release Notes

Version 3.23.0 - release estimated 23.06.2026

Written by

Bjørn Willoch Bjanger, Product owner

Contents in release

3.23.0

These are the major changes in the backend version 3.23.0

This version covers work done in sprints 116,117 and 118.

Some features have already been made available in hotfixes to 3.22 backend

Note that steps have been taken in the code to disable basic authentication to the API. We will no longer allow this after September 1st. Check that your integrations are using OAUTH token authentication before this!

New features and improvements

- Admin site is now totally reworked visually for a fresher and cleaner look, we like the new look and feel!
- Added flag on products "Ask for quantity", true or false. When set, POS should ask how many should be sold. This is common for items that are typically bought in multiple items, and makes self checkout more robust for such items
- You can now deep copy a role to a new role, with all selected privileges and restrictions

- Shop id is now added to the file name for GBAT and SIE4 accounting files, to support splitting reporting to different systems through eMonkey and ShareSpine services
- Discount reason codes are now exported to discounts in Go Discover making them available for dashboards and reports there
- ICD Media can now be defined without shop groups being used for application to shops
- If a VAT rate override is applied in a sale, the selected Vat rate override group name will now be shown in the B0 PDF receipts
- Products to count can now be filtered by category in API and on the products to count tab in stock location
- Product suggestions, "People also bought..." connections between products, can now be populated from your historic sales in Go Discover, from the product page in backoffice. Select how many suggested products you want, and Go Discover will give you the corresponding number of products with the highest sales together with your product of interest
- A price history report is now available across products. You can filter for dates, category and single product and variant
- You can now search for products also using a value from the alternative barcodes defined in "Multiple SKUs"
- When licenses were deactivated automatically it also disabled auto renew option for them, with auto renew disabled licenses are not being paid and expires again automatically. To solve this we have improved license reactivation
- Tax exempt customers feature has been added. You can flag a customer as being exempt for sales tax, which will be supported in POS to not apply sales taxes when such a customer is registered. Tax exempt customers can be charities, governmental agencies, schools, non profits and other categories
- Swish integration for the Swedish mobile payment scheme is now available directly in GO POS. Setup and proxy is now released in backend, implementation in POS will come in the next POS version 4.23.
- We will now delete master users that has been inactive for more than a year, excluding accounts that are admins or distributors, to clear away stale accounts
- Cost centre per shop is now added to SIE4 accounting exports
- We are now adding logs of integrations doing their tasks, also successfully, to facilitate checking logs seen in backoffice

- Support is now added for QR code logins to POS, removing the need to distribute account password to remote locations
- To make it easier to work with layout templates, we have moved product selection into the tile, to avoid needing to drag and drop a product outside the screen. You can now also define templates for templates, making it easier to adjust common layouts for shops that have differing assortment
- We are now aggregating discounts given for discount reason codes in the cashier performance report
- Stock report in PDF format now shows cost price, sales price, quantity, and the total values calculated based on the quantities
- Using Pusher presence channels, you can now verify that at least one POS in a shop is online and available for click and collect ordering before the order is placed
- In the unsold products report, we now only show products linked to the selected shop
- Translated names for products are now displayed in the PDF receipts, matching the language selected for the shop
- Stock value before and after a stock event is now sent to Go Discover, allowing you always see updated stock levels for any day. In backoffice, you can not examine stock for a given day
- We are now introducing an integration to Mailchimp! Activating this integration you can use mailchimp to send emails to customers, customer groups, customers of a given shop. Combine this with promotions with discount codes and you have quite the tool to attract customers back into your shops
- URL to Ordin backoffice updated to new domain

Bugs fixed

Numerous fixes and improvements have been made.

- VAT and net amounts for bundle products are no longer reported to deviations
- Added card for Adyen subscription for license was not visible when epay parameter was enabled

- Stock location stock pdf report was not generated with many products in stock
- Cost price for to go priced products reported as 0 in reports
- Languages differ in order PDF when language of masteruser and shop are different
- Gift card resume report fails
- Links to gift card types don't work in Gift card summary page
- Ticket types with variants are listed in unsold products report

API changes

- Order line attributes for the new GS1 barcode standard has been defined, preparing POS to populate these with extracted values from structured barcodes that are coming. We will for now store 01 - GTIN-14 barcode scanned, 10 - BatchNumber, 11 - ProductionDate, 16 - SellByDate, 17 - ExpirationDate, 20 - Variant, 21 - SerialNumber, 310n - NetWeight (in kg, n is number of decimals), 315n - VolumeInLitres (n is number of decimals)
- Two new system reason codes added to make transfers explicit: TransferOut, negative system code - TransferIn, positive system code
- Diff_start_cash added as an attribute to day tallies, to reflect changes from the expected start amount from previous day from BOD in POS

New parameters

The following new parameters are added in this backend release:

- Backoffice.Setting.SelectAllShopsForProducts.Enabled, default value false. When set, all shops will be listed in shops restrictions for new products, allowing shop owners or area managers to deselect a product availability rather than selecting it, as this would hide the product from other shops
- Shared.Setting.AskForVATWhenSold.Enabled, default value false. When enabled, show a flag on product page to select that the product should by default be sold without VAT. This feature is to support UK taxation rules where freshly baked items can be sold without VAT, while a reheated product must be sold with standard VAT

- Pos.Setting.LanMode.Enabled, default false. Enables LAN communication between registers and KDS in local offline scenarios

Complete issue list

WM-7323	Ask for quantity		TESTING	3	
WM-7324	Copy a role to a new role		TESTING	3	
WM-7258	Bundle vat and net amounts go to deviation in eAccounting		TESTING	3	
WM-7334	Add shop_id to filename for GBAT and STE4		READY FOR TEST	1	
WM-7335	Add discount reason code to kibana		TESTING	3	
WM-7326	Reverse logic for shops restriction on products		TESTING	5	
WM-7329	Sell items without VAT as default		TESTING	1	
WM-7333	ICD Media without shop groups		TESTING	3	
WM-7292	[ServiceDesk] List all active registers per distributor		TESTING	2	
WM-7083	[ServiceDesk] Rework inventory count		TESTING	5	
WM-7225	Products created through API or Bulk data have "quantity": null		TESTING	1	
WM-6868	CLONE - [Fiscal]Selected VAT country is missing in Receipt Search BO		TESTING	2	
WM-7222	[ServiceDesk] Filter product to count by categorie		TESTING	2	
WM-7110	Populate product suggestions from product sales in Kibana		TESTING	8	
WM-7332	Add orderline attributes for new GS1 barcode standard		TESTING	1	
WM-6880	[ServiceDesk] Price history report		TESTING	5	
WM-7256	[ServiceDesk] We want to be able to search on all SKU's		TESTING	2	
WM-7328	[ServiceDesk] Admin overview - active registers (registers with sales) per MU and distributor		CLOSED	-	
WM-7389	Log impersonation data		TESTING	1	
WM-7390	[ServiceDesk] Adyen subscription - Added card not visible and payment not withdrawn when ePay parameter is disabled		TESTING	-	
WM-7393	When cost price recalculation after purchase order completion is enabled price history tracks cost price changes incorrectly	BO 3.22	CLOSED	-	
WM-7419	Reanble auto renew on license reactivation		TESTING	2	
WM-7593	[ServiceDesk] Feil ved generering av lager rapport		CLOSED	-	
WM-7639	[ServiceDesk] Cost price issue for ToGo products in reports		TESTING	-	
WM-7223	Clicking on any product in Stock location Stocks tab table triggers sending a GET request		TESTING	1	
WM-7387	Add tax-exempt feature for customer		TESTING	1	
WM-7240	[ServiceDesk] Reminder: New Swish Integration for GO POS		TESTING	8	
WM-7388	[ServiceDesk] Request to delete inactive master users after one year without sales		TESTING	3	
WM-7442	Set cost centre per shop when file per shop is activated in STE4		READY FOR TEST	3	
WM-4602	Add log when integration performs action		TESTING	2	
WM-7449	Token handling for QR code login in POS		TESTING	2	
WM-7450	Select product from template position in layout templates		TESTING	5	
WM-7382	Adjust Turnover Calculations to Exclude Sales Tax		TESTING	2	
WM-7325	Copy layout folder to other layout templates		TESTING	8	
WM-7416	Languages differ in Order PDF header and body when MU and Shop languages differ		TESTING	1	
WM-7331	Add discount reason codes to cashier performance export		TESTING	5	
WM-7451	In Purchase order report Submit modal main parameter fields should be inactive		TESTING	1	
WM-7452	Import of shops		READY FOR TEST	5	
WM-7282	[ServiceDesk] Varetellingsrapport		CLOSED	-	
WM-7255	[ServiceDesk] Giftcard improvements		CLOSED	-	
WM-7363	Use translated Product name in PDF's		CLOSED	-	
WM-7449	[ServiceDesk] Automatically enable license renewal when activating a license		CLOSED	1	
WM-7519	Update adminsite default value for Adyen Certificate URL	BO 3.19	CLOSED	-	
WM-7512	Resolve deprecated actions on github		TESTING	1	
WM-7549	Do not garbage collect offsite storage attachments		TESTING	-	

↑ WM-7915	Disable Basic authentication	TESTING	5	○	👤
✘ WM-7603	Multiple SKU button is out of page from 992px page width	READY FOR TEST	2	○	👤
