

# Extenda GO POS Release Notes

---

**Version 4.22 - expected release in app store 24.06.2026**

## Written by

Bjørn Willoch Bjanger, Product owner

## Service pack releases to 4.21 POS

There were five service pack releases for 4.21:

- **V4.21.1:** Merging error, no new content
- **V4.21.2:** Fix for crash during loading of shop sales taxes
- **V4.21.3:** Fix for payment errors seen when paying with Svea
- **V4.21.4:** Update Adyen SDK to 3.9.2. Fix for Sumup transactions staying on pending
- **V4.21.5:** Added pagination for Adyen stores gotten for NYC1 and tap to pay on iPhone setup. Sumup Solo Terminal issue

## Contents in release

### **4.22**

These are the major changes in Extenda GO POS version 4.22

This version covers work done in sprints 112, 113 and 114.

## New features or improvements

- You can now login to POS using a license QR code generated in admin site
- When the flag “Ask for quantity” is set on a product, POS will now ask “How many?” when you sell this product
- You can now set the device id in POS if it is important to know which iPad was involved in logged actions
- We have added a button to print the KDS order slip from the orders list, in case of communication problems with KDS or print failing
- Self checkout user interface has been tightened around the bill actions possible
- When a new customer is created, that customer is also added to the current bill
- When scanning a Vipps QR code, we will only add a customer to the bill if found in customer club or internal customer, to avoid confusion around a scanned number with no customer connection
- When paying by invoice (customer credit), you can now add a purchase order number or other customer relevant information in a free text field
- Turnover calculations have been adjusted to exclude sales tax
- User logout timer is now stopping the timer when customers are created
- When downpayments to preorders are made, we now give a list of downpayments received per user in the Z report

## New parameters

- No new relevant parameters in this build

## Bugs fixed

The following fixes and improvements have been made.

- Breaking constraints in the add giftcard view fixed
- Customer contact selection is not working correctly in payment view
- Manual bundle does not work in iPOS
- Wrong gross margin calculations for bundle products
- Multiple POS crashes on logout
- Investigate core data save errors in production
- Discount text is gone from receipts

- Disable variant editing for return item
- Wrong merchantid used in cross store returns against Svea
- Products without stock (new product type) are not shown as button in POS
- Do not print order slip for normal sales without preparable items
- POS freezes on shop selection screen after first installation
- New self checkout language selection broken
- Incorrect available to refund amount

## Complete issue list

Many of the issues registered as bugs are findings in functional testing and regression testing, so called QA bugs. Few of the bugs have actually been detected in production.

<input checked="" type="checkbox"/>	WM-6554	Adjust swiftgen template to correctly enforce cascade relationship deletion	<input type="radio"/>	CLOSED
