

Extenda GO POS Release Notes

Version 4.23 - expected release in app store 20.08.2026

Written by

Bjørn Willoch Bjanger, Product owner

Service pack releases to 4.22 POS

There were four service pack releases for 4.22:

- **V4.22.1:** Returns do not work from PosConnector javascript
- **V4.22.2:** Fix for terminal connection issue, order could not be closed
- **V4.22.3:** Improvements to split bill by item handling
- **V4.22.4:** Line items were not pressable in certain scenarios

Contents in release

4.23

These are the major changes in Extenda GO POS version 4.23

This version covers work done in sprints 115, 116 and 117.

New features or improvements

- If a cafe or restaurant finds itself to be offline from the GO POS server, so orders sold are not appearing on the kitchen screens, a new local offline mechanism can now be enabled, allowing all POSes and KDSes to communicate among themselves locally, as long as they are connected to the same network. One POS will then act as server for the other devices and updates the server when communication is restored. This can be piloted in this version, more testing is needed for full production use
- You can now search for products and variants using translated names
- Tax exempt feature is now supported for customers, this is very relevant for USA shops where entities like governmental agencies and others are exempt from sales tax
- Star BSH 20 Bluetooth scanners are now supported
- User name is now shown in the orders list
- Settlement report from relevant terminals is now produced as an image and showing in the EOD report in backend
- POS now subscribes to pusher presence channels, enabling third party components like a web shop to know if any pos in a shop is available before placing a preorder to the shop
- Swish online is now supported with a direct integration, this is a nice feature for the Swedish market
- You can now show another text than the default "Prepared" text for items that have been picked or handled in preorders. The text is configured in backoffice
- The all done button for preorders can now be hidden by configuration
- VAT override can now be set also for self checkout POS, relevant for self checkout used in different countries as is the case for trains between countries.
- Cash difference from Begin of day is now reported in EOD report and Z report
- Downpayments are now flagged in the transaction data so they can be accounted differently to normal payments
- You can now use multiple amount discounts for diller if you have multiple available.

New parameters

- `POS.Setting.FallbackToDeferredAuthorizationForNets.Enabled`, default value `false`. Use deferred auth payments if offline payments fail. This requires an activation on Nets side also
- `alwaysUseTogoPriceinSCO.Enabled`, default value `false`. This parameter allows you to skip the to stay/to go selection screen as the first step in self checkout mode
- `POS.Setting.HidePreparedButtons.Enabled`, default value `false`. Enables hiding the prepared buttons in preorders when this makes sense for your orders
- Layout of receipt improved for printing of Infrasec information in Sweden
- Variants tab layout improved for productinfo page on iPhones. Productinfo page layout has also been improved on iPhone
- A confirmation step is now added to refunds of transactions in returns
- Expiration of gift cards is now always happening at 00:00, as is the case in backend API
- If log out timer is activated, user should be logged out also after ipad has been restarted if time has expired
- Referenced refunds are now also supported for ITOS terminals
- Return of an order paid by gift card will now allow you to select other tenders to use if the original gift card has expired between the purchase and the return

Bugs fixed

The following fixes and improvements have been made.

- Fixed display of customer name in bill after lookup of customer with Vipps MobilePay
- Share/Park bill buttons disappear from bill after going back from payment view, and are also wrongly showing on preorders
- Add customer button was always showing in self checkout mode
- Product categories that has no products to be shown are now also hidden in self checkout mode
- Network connection error due to cached credentials has been resolved

Complete issue list

Many of the issues registered as bugs are findings in functional testing and regression testing, so called QA bugs. Few of the bugs have actually been detected in production.

✖ WM-3658	Fix receipt spacing when TCISID is shown	☐ Closed ZM
✖ WM-4512	Fix variants tab in product info view for iPOS	☐ Closed BH
↑ WM-5684	Search in POS by translated variant names	☐ Closed ZM
✖ WM-6918	[ServiceDesk] Reconciliation/settlement in backoffice	☐ Closed AS
↑ WM-7386	Add tax-exempt feature for customer	☐ Closed ZM
☰ WM-7444	Mesh communication locally in shop	☐ In Review AS
