Extenda GO POS

POS Release Notes

Version 4.24 — Estimated Release: *Nov 19th*

Author: Dag Erik Lund

Service packs since 4.23 release

There has been one service pack since the 4.23 release.

4.23.1

- WM-8388 Fix for POS becoming unusable after updating to the new version.

4.23.2

- WM-8409 Denomination bugged

Contents in release

4.24

These are the major changes in Extenda GO POS version 4.24.

This version covers work done in sprints 118, 119 and 120.

New features and improvements

- GS1 2D barcodes are now supported. When a GS1 code is scanned, the data in it is read and stored on the order line, together with the full scanned code.
- When a GS1 barcode shows that an item is close to its best before, sell by or expiry date (less than 2 days), the cashier is told and can give a discount of 10, 20, 30, 40 or 50% with one tap. A discount reason code can be selected if reason codes are defined.
- Items can now be sold without VAT on a line by line basis. When enabled, a "Without VAT" option is shown together with to stay and to go when editing the bill line. This is relevant for UK bakeries, where fresh hot items can be sold without VAT while items kept hot must be sold with VAT.
- Down payments are now shown on both the proforma receipt and the receipt, with the amount, time and payment reference of the down payment.
- If the cashier enters a higher amount than the requested down payment, the POS now asks whether the full amount should be taken as down payment. If not, the extra amount is handled as cash back.
- Printing of the EOD report can now be skipped also for shops using Fiskaltrust and Fiskaly Austria.

- The bill total is now shown slightly bigger and in bold, so it stands out.
- The POS now handles large updates from backend that are too big to be sent directly, by fetching the data itself. This makes syncing of large products and orders more reliable.
- Old product image data is now cleaned from the POS database after end of day, keeping the local database smaller.
- The Payex terminal integration has been removed from the terminal setup page.

New parameters

The following new parameters and smaller improvements are added in this release:

- Shared.Setting.AskForVATWhenSold.Enabled. Enables selling items without VAT per bill line. Only products with the attribute should_ask_for_vat set to 1 get the "Without VAT" option. The product keeps its normal VAT rate, which is used unless the option is chosen.
- POS.Setting.HidePreparedButtons.Enabled now also disables the order item checkboxes in preorders, in addition to hiding the prepared buttons.
- Postal code and city are now shown in the Swedish order (street, postal code, city) also on the summary page and in the shipping information on receipts.
- When editing a customer, the window now closes if you save without any changes.

Bugs fixed

The following fixes and improvements have been made.

- Fixed an issue where web shop orders could be registered without a register, so they were left out of the end of day report and the VAT reporting.
- Fixed an issue where orders were deleted instead of cancelled when merging shared bills.
- Fixed an issue where VAT was removed from the bill total but not from the line items when removing VAT.
- Serial numbers are now validated against the purchase when returning items that are part of a bundle.
- Fixed a crash when the currency was set to Hong Kong Dollar (HKD).
- Fixed a crash after payment when the bill contained deleted line items (regression from 4.22.4).
- Fixed several other crashes, among others during Star receipt printing, slip printing, user selection and the Nets payment view.
- Fixed tender type names not being visible on iPad mini.
- Fixed the numeric keypad being clipped when using the floating keyboard on iPad.
- "Cash movement events" is now translated into Swedish in the EOD report.
- A message is now shown when adding a product without valid add-ons in the price region.
- Fixed the OK button not responding on the "Preorder is occupied" warning.

Complete issue list

Issue	Type	Summary
WM-7974	New Feature	Sell items without VAT as default
WM-8048	New Feature	Clean old orders and data from database of POS and KDS
WM-8122	New Feature	Ask for discount on items near expiry date
WM-8125	New Feature	Parse scanned GS1 barcodes
WM-8296	New Feature	Remove Payex terminal integration
WM-4401	Improvement	Add bold font option for total of bill
WM-4437	Improvement	Let user save customer without anything changed
WM-8127	Improvement	Investigate customer display using website
WM-8172	Improvement	Handle Pusher reference
WM-5741	Bug	Validate serial number for return items in a bundle
WM-7038	Bug	POS deposit/prepayment
WM-8163	Bug	Provide sample receipt data file for ReceiptHero
WM-8438	Bug	"OKAY" button is unresponsive on the "Preorder is occupied" warning modal
WM-7995	Bug	Config to remove the Finish/All done button
WM-8145	Bug	Show deposit amount in receipts
WM-8151	Bug	Swap postal code and city on summary page and receipts
WM-8045	Bug	Missing register on orders
WM-8215	Bug	Tender type names are not visible on iPad mini
WM-8219	Bug	Numeric keypad is clipped when using the floating keyboard
WM-8230	Bug	POS hard-deletes orders on shared-bill merge instead of cancelling them
WM-8234	Bug	"Cash movement events" is not translated into Swedish in EOD
WM-8235	Bug	Verify offline support for all payment terminal integrations
WM-8251	Bug	Crash rendering deleted order line items in bill list after payment (4.22.4 regression)
WM-8278	Bug	Add "service" value to iOS POS logs
WM-8392	Bug	VAT is not removed from a line item, though it is removed from the main bill

Issue	Type	Summary
WM-8412	Bug	No pop-up when adding product without valid selectable add-ons in price region
WM-8394	Bug	POS crashes when currency is set to Hong Kong Dollar (HKD)
WM-7572	Task	Enable skipping EOD report printing for Fiskaltrust and FiskalyAT
WM-8115	Task	Crash in currency manager during startup
WM-8116	Task	Crash during bill footer navigation
WM-8117	Task	Crash during slip printing layout
WM-8119	Task	Crash in user selection (index out of bounds)
WM-8120	Task	Crash in Nets integration in the payment view
WM-8121	Task	Crash from divide by zero in rounding
WM-7569	Task	Investigate rewriting unit tests from Quick to Testing
WM-8114	Task	Crash during Star receipt printing
WM-8167	Task	Migrate Cocoapods to SPM
WM-8168	Task	Move #ios-operations channel to ExtendaRetail Slack workspace
WM-5055	Task	Remove old SCO code from POS
WM-8252	Task	Retire Wallmob/podspec-repo and TerminalAPIKit fork after SPM migration
WM-8229	Sub-task	Disable order item checkboxes when POS.Setting.HidePreparedButtons.Enabled is enabled
